

C L A I M S

We Claim:

1. A synthesizer for forming a polymer chain by sequentially adding monomer units found in one of a plurality of reagent solutions, the synthesizer comprising:
 - a. a first vial and a second vial, wherein the first vial and the second vial are configured for holding the plurality of reagent solutions;
 - b. means for dispensing configured for dispensing the plurality of reagent solutions into the first and second vials; and
 - c. means for selectively expelling material from the first and second vials, configured for coupling to the first and second vials and purging material from a selective one of the first vial and the second vial.
2. The synthesizer according to claim 1 further comprising a cartridge configured for holding the first vial and the second vial.
3. The synthesizer according to claim 2 wherein the cartridge holds the first vial and the second vial along a circular perimeter of the cartridge.
4. The synthesizer according to claim 3 further comprising a motor coupled to the cartridge configured for selectively rotating the cartridge relative to the means for sequentially dispensing.
5. The synthesizer according to claim 4 further comprising a drain plate coupled to the cartridge for separating the first vial into a first bank of vials and the second vial into a second bank of vials.

1 6. The synthesizer according to claim 1 further comprising a chamber bowl coupled to
2 the means for selectively expelling wherein the chamber bowl contains any spilled material.

1 7. The synthesizer according to claim 6 further comprising a seal coupled to the chamber
2 bowl to prevent spilled material from escaping outside the chamber bowl.

1 8. The synthesizer according to claim 1 wherein the means for selectively expelling
2 further comprises:

- 3 a. means for forming a pressure differential between a first opening and a second
4 opening of the selective one of the first vial and the second vial; and
5 b. a waste tube to collect material expelled from the selective one of the first vial
6 and the second vial.

1 9. The synthesizer according to claim 1 wherein the means for dispensing further
2 comprises:

- 3 a. a plurality of valves for controlling dispensing of the plurality of reagent
4 solutions; and
5 b. a plurality of dispense lines wherein each of the plurality of the dispense lines
6 is coupled to a corresponding one of the plurality of valves for delivering one
7 of the plurality of reagent solutions to a selected vial.

1 10. The synthesizer according to claim 1 wherein each of the first vial and the second vial
2 further comprise a precision bored interior configured to hold a frit for retaining a solid
3 material above the frit, and further wherein the first vial and the second vial are configured to
4 maintain a consistent flow through the precision bored interior.

1 11. A synthesizer for forming a polymer chain by sequentially adding monomer units
2 found in a plurality of reagent solutions, the synthesizer comprising:

- 3 a. a first vial configured to hold the plurality of reagent solutions;
4 b. a second vial configured to hold the plurality of reagent solutions;
5 c. a cartridge to hold the first vial and the second vial;
6 d. a dispensing system to dispense the plurality of reagent solutions into the first
7 and second vials; and
8 e. a purging system to remove material from a selective one of the first vial and
9 the second vial.

1 12. The synthesizer according to claim 11 wherein the cartridge holds the first vial and the
2 second vial along a circular perimeter of the cartridge.

1 13. The synthesizer according to claim 11 further comprising a chamber bowl coupled to
2 the purging system wherein the chamber bowl contains spilled material.

1 14. The synthesizer according to claim 13 further comprising a seal coupled to the
2 chamber bowl to prevent spilled material from escaping outside the chamber bowl.

1 15. The synthesizer according to claim 11 wherein the purging system further comprises:

- 2 a. means for forming a pressure differential between a first opening and a second
3 opening of the selective one of the first vial and the second vial; and
4 b. a waste tube to collect material expelled from the selective one of the first vial
5 and the second vial.

1 16. The synthesizer according to claim 11 wherein the dispensing system further
2 comprises:

- 3 a. a plurality of valves for controlling dispensing of the plurality of reagent
4 solutions; and
5 b. a plurality of dispense lines each coupled to one of the plurality of valves for
6 delivering a corresponding one of the reagent solutions to a selected vial.

1 17. The synthesizer according to claim 11 wherein each of the first vial and the second
2 vial further comprise a precision bored interior configured to hold a frit for retaining a solid
3 material above the frit, and further wherein the first vial and the second vial are configured to
4 maintain a consistent flow through the precision bored interior.

1 18. The synthesizer according to claim 11 further comprising a drain plate coupled to the
2 cartridge for separating the first vial into a first bank of vials and the second vial into a
3 second bank of vials.

1 19. The synthesizer according to claim 11 further comprising a motor coupled to the
2 cartridge to selectively rotate the cartridge relative to the dispensing system.

1 20. A synthesizer for creating a polymer chain by sequentially adding monomer units
2 found in one of a plurality of reagent solutions, the synthesizer comprising:

- 3 a. a plurality of vials wherein each of the plurality of vials is configured to hold
4 material including the plurality of reagent solutions;

- 5 b. a cartridge for holding the plurality of vials and dividing the plurality of vials
6 into a first bank of vials including at least one of the plurality of vials and a
7 second bank of vials including at least one of the plurality of vials;
8 c. a dispensing system configured to sequentially dispense selective ones of the
9 plurality of reagent solutions into the plurality of vials; and
10 d. a purging system configured to selectively purge material from the first bank of
11 vials and the second bank of vials.

1 21. The synthesizer according to claim 20 further comprising a first drain coupled to the
2 first bank of vials and a second drain coupled to the second bank of vials, the first and second
3 drains each configured for selectively coupling with the purging system for draining the first
4 bank of vials and the second bank of vials.

1 22. The synthesizer according to claim 21 wherein the purging system further comprises a
2 waste tube capable of selectively coupling with a selective one of the first drain and the
3 second drain to purge material from the first bank of vials and the second bank of vials.

1 23. The synthesizer according to claim 20 wherein the dispensing system further
2 comprises:

- 3 a. a plurality of valves for controlling the dispensing of the plurality of reagent
4 solutions; and
5 b. a plurality of dispense lines each coupled to one of the plurality of valves for
6 delivering a corresponding one of the plurality of reagent solutions to a selected
7 vial.

1 24. A purging system configured for use with a synthesizer containing a first bank of vials
2 and a second bank of vials wherein the first bank of vials has a first drain and the second
3 bank of vials has a second drain, the purging system comprising:

- 4 a. a pressurizing system for creating a pressure differential within a selective one
5 of the first bank of vials and the second bank of vials; and
6 b. a first waste tube capable of coupling with a selective one of the first drain to
7 purge material from the first bank of vials and the second drain to purge
8 material from the second bank of vials.

1 25. The purging system according to claim 24 further comprising a drain seal coupled to
2 the first waste tube for creating a flexible seal between the first waste tube and the selective
3 one of the first drain and the second drain.

1 26. The purging system according to claim 24 further comprising a second waste tube
2 capable of selectively coupling with the first drain to purge the material from the first bank of
3 vials and the second drain to purge the material from the second bank of vials wherein the
4 purging system is capable of selectively and simultaneously purging the first bank of vials and
5 the second bank of vials.

1 27. A vial comprising a precision bored interior configured to hold a frit for retaining
2 material within the vial above the frit and maintain a consistent flow through the precision
3 bored interior during a flushing procedure.

1 28. The vial according to claim 27 further comprising an exterior dimension configured to
2 fit within a receiving hole of a cartridge, thereby providing a pressure-tight seal between the
3 vial and the cartridge.

1 29. A vial comprising an exterior dimension configured to fit within a receiving hole of a
2 cartridge thereby providing a pressure-tight seal between the vial and the cartridge and a
3 precision bored interior to maintain a consistent flow through the precision bored interior
4 during a flushing procedure.

1 30. The vial according to claim 29 further comprising a frit positioned within the precision
2 bored interior to retain material within the vial above the frit.

1 31. A method of selectively and sequentially dispensing a plurality of reagent solutions to
2 a plurality of vials divided into a first bank of vials and a second bank of vials and selectively
3 purging material from the first bank of vials and the second bank of vials, comprising the
4 steps of:

- 5 a. dispensing one or more of the plurality of reagent solutions to a selective one
6 or more of the plurality of vials; and
- 7 b. purging material from a selective one of the first bank of vials and the second
8 bank of vials.

1 32. The method according to claim 31 wherein during the step of dispensing one of the
2 plurality of reagent solutions is dispensed into one or more of the plurality of vials in a
3 parallel fashion.

1 33. The method according to claim 31 wherein during the step of dispensing one or more
2 of the plurality of reagent solutions are dispensed into one or more of the plurality of vials in
3 a serial fashion.
